

You could be an **Operator**

*Growing what matters
starts with you.*

Process Operators have a key role within the manufacturing team. They operate equipment, coordinate plant activities, monitor and optimize processes, and perform maintenance.

They provide leadership, mechanical skills, and technical expertise to ensure quality, efficiency, and safe operation of the production facilities.

 **RESPONSIBILITIES**

- Apply technical knowledge to safely operate and optimize production facilities, perform advanced troubleshooting, and resolve to eliminate and prevent environmental and safety events
- Teach, mentor, and coach new operators. Acting as a subject matter expert for plant training and documented processes
- Identify opportunities for improvement and assist in implementation of new initiatives
- Support the plant as an influential leader and promote an environment of teamwork while leading by example

 **EDUCATION/TRAINING**

- Delta College Chemical Process Fast Start Certificate
- Associate's Degree in Chemical Process or Chemical Technology
- 4+ years military experience in a technical field

 **CAREER PROGRESSION**

- Technical Advisor
- Maintenance and Project Coordinator
- Maintenance Planner and Coordinator
- Process Control Coordinator

 **SKILLS FOR SUCCESS**

- Mechanical Aptitude
- Critical Thinking
- Strong Communication
- Teamwork
